

— REAL ASSETS · LIVING 3D REPLICAS

See every asset. Before it happens.

Live 3D digital twins that monitor, simulate and predict —
for energy, buildings, fire safety and industry.

What is a Digital Twin?

A **living virtual replica** of a physical asset — fed by real-time data, powered by simulation, used to make **better, faster decisions**.

01

Capture

3D model of the real asset

02

Connect

Live data from sensors & systems

03

Simulate

Test scenarios with zero risk

04

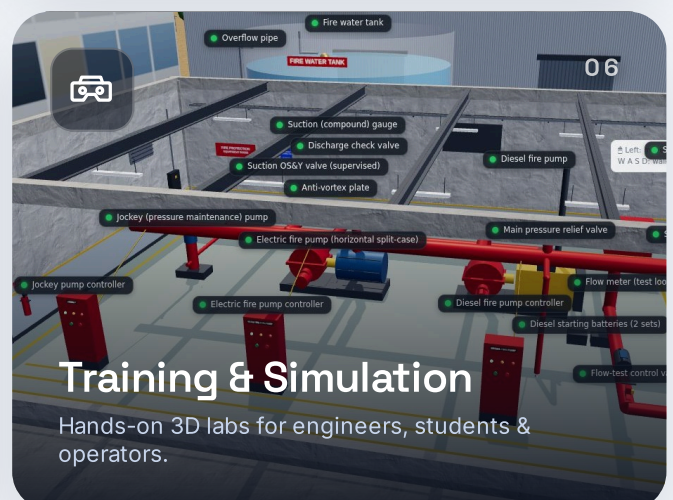

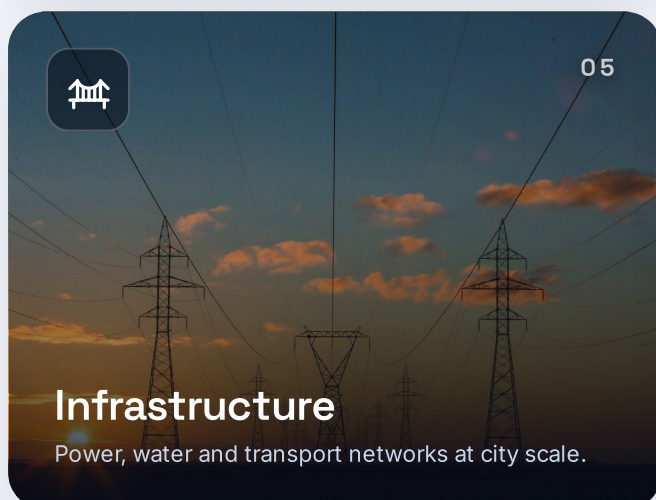

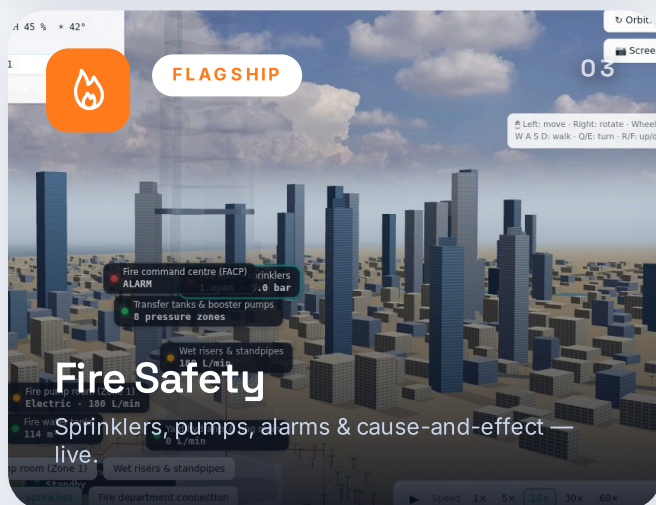

Optimize

Act early, cut cost & downtime

One platform. Six industries.

Purpose-built digital twins for the
assets that matter most.

Everything your asset knows, in one view.

Real-time monitoring

Live KPIs, alarms & events.

3D visualization

Explore every component in 3D.

Simulation

Physics-based behaviour, in time.

Data integration

IoT, BMS, SCADA, BACnet, Modbus.

Analytics

Trends, dashboards & reports.

Predictive maintenance

Spot faults before failure.

Scenario testing

"What-if" with zero risk.

7 in 1

capabilities on a single platform

Engineers who build twins that work.

From site survey to live 3D twin, integration and training — delivered by one team.

6+

Industries served

7

Core capabilities

2

Languages · AR / EN

1

Unified platform

End-to-end delivery

Model, integrate, deploy, train.

Engineering-grade

Built on NFPA & international codes.

Open integration

Works with your existing systems.

Arabic & English

Bilingual platform & local support.

Flexible licensing

Monthly or yearly · full or modular.

Built for teams

Universities, companies & operators.

LET'S TALK
